

THERMALEX 403

Sectional Overhead Door

SPECIFICATION:-

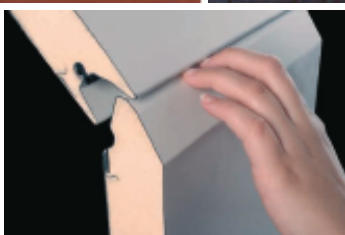

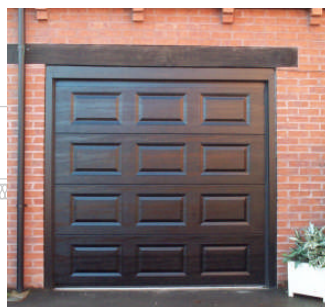

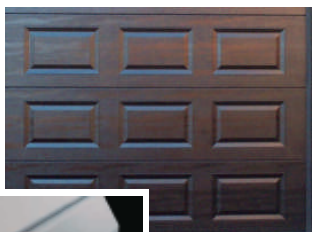

The 40mm thick 'Georgian Style' wood grain door panels are constructed from galvanised steel sheets bonded together with CFC free polyurethane foam.

Thermal 'U' values are:-

Individual Solid panels	0.6W/m ² k
Full Solid	0.9W/m ² k
With windows / pass door	1.0W/m ² k
With windows & pass door	1.1W/m ² k

OPERATION:-

Manual operation is by means of push up and pull down. Each door can be easily opened by hand due to the precise counter balance of the door springs. An internal shoot bolt is provided as standard for locking. All manually operated doors are fitted with a recessed lifting handle.

Each panel is constructed to give finger pinch protection. Vertical and horizontal tracks, hinges brackets, capping and hardware are galvanised, with the assembled door running on adjustable galvanised roller carriers bolted to each individual panel. The door is perfectly balanced by means of helical springs at high level, mounted on galvanised steel plates and quality bearings to give a smooth and quiet operation. Rubber seals are fitted to the top, bottom and both sides of the door to give an all-round perimeter seal when closed.

Electrical operation is by means of a 240 volt, single-phase 'domestic type' operator. Activation is by an internal bell push switch and radio remote control, inclusive of two key-fob transmitters. The drive system incorporates a fully adjustable safety device which will automatically re-open the door if it is accidentally closed on to an obstruction. An integral light is also supplied as standard which automatically switches on as the door is activated, and extinguishes after a short time delay. Manual over-ride is also provided as standard.
